Office Action Summary

The terminal disclaimer filed on October 01, 2002 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 6,020,586 has been reviewed and is NOT accepted.

The application/patent which forms the basis for the double patenting rejection is not identified in the terminal disclaimer.

### ***Double Patenting Rejection***

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 11-13 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 and 10 of prior U.S. Patent No. 6,020,586. This is a double patenting rejection.

The limitation as recited in part (d) of claim 1 of the Patent No. 6,020,586 is considered to be inherent in claim 11 of the application SN: 09/808,468, since the multipole ion guide is a two dimensional and used to trap ions in and release ions from the ion guide.

The limitations as recited in claims 12 and 13 of the application SN: 09/808,468 are considered to be inherent in claims 1 and 10 of the Patent No. 6,020,586, since the ions entering the ion guide during the ion trapping and ion release as recited in claim 10 of the Patent No.

6,020,586 is to prevent excessive charge buildup in the ion guide and to perform the duty cycle of the analyzer.

***Rejection Under 35 U.S.C. 102(b)***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis et al. (See the reasons as indicated in the previous office action dated April 01, 2002 in paper No. 8).

Applicant's arguments filed on Oct. 01, 2002 have been fully considered but they are not persuasive.

Applicant argued that Davis et al. does not disclose a multipole ion guide.

This argument is not persuasive. Since Davis et al. disclose a quadrupole electrode structure which provides field in all four quadrants or monopole electrode structure which provides field in only one of the quadrants (see col. 10, lines 3-7).

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
